Science, Mathematics, Agriculture and Environment
QS Graduate Employability Rankings 2019

#1 in Queensland for graduate employability
QS Graduate Employability Rankings 2019

3 Campuses
6 Faculties
55,200+ students from more than 140 countries
#1 University in Australia in the prestigious Nature index

More national teaching awards than any other Australian university

State-of-the-art facilities
Largest choice of science disciplines
UQ Science offers you a huge diversity of disciplines, encompassing pathways to traditional and emerging cross-disciplinary science careers, and incorporating broader options for careers in areas such as agriculture, biomedical science, veterinary science, the environment and food technology, to name a few.

You will find employment among the largest employers of scientists, technologists, business managers, consultants and other professionals, both in Australia and overseas.

Great career outcomes
As a UQ Science graduate, your comprehensive, up-to-date knowledge and practical skills will equip you to undertake key roles in solving the challenges facing our world today. You can anticipate high employability rates and attractive starting salaries because of your skills and expertise. You will also have access to other UQ graduates through a strong, global network of science alumni.

Exceptional learning opportunities
As a UQ Science student you will be exposed to a range of relevant and innovative programs that will prepare you to work in solving local, national and global challenges. You will access exceptional learning experiences with highly awarded teachers who will help you gain insights into the complexity of topical and contemporary problems through case studies and scenarios. Your classes will be enhanced by online interactive modules incorporating virtual objects such as 3D models or ‘virtual fieldtrips’ using immersive visualisation eLearning tools. You will build and extend your technical and applied expertise through a combination of laboratory based practicals, workshops, Australian or international field studies, internships and work experience. This blend of discipline-focused and practical knowledge will allow you to develop your analytical, teamwork and problem-solving skills to equip you for a career in industry or research.

You will also access premier student social and learning facilities, and the largest number of science-based teaching and research spaces in Queensland.

Practical experience
You will benefit from interacting with industry representatives, undertaking professional placements or internships, participating in the Summer Research Scholarships program with award-winning UQ researchers, and integrating industry-based training and real-life projects into your theoretical studies.

Your program may incorporate a year of research-intensive study called ‘honours’, or you may choose to complete honours as an additional component to gain valuable project management and research skills. Your practical experience will open your world to a diverse range of careers that will allow you to work on issues such as climate change, biosecurity, feeding the global population, sustainable energy, disease eradication and the management of diminishing natural resources.

You may even choose to study overseas at one of UQ’s 140 international partner organisations to add a global perspective to your employment options.

Embark on a journey with us and discover how UQ is uniquely placed to make a difference to your future.

Experience UQ

We offer a range of experiences both before you start at UQ and once you’re studying, so you can make the most of your time at UQ.

UQ Open Day

St Lucia 2 August 2020
Gatton 16 August 2020

Find out about programs and courses, explore the campus and facilities, meet staff and current students, and enjoy the range of fun activities at this free event.

future-students.uq.edu.au/open-day

Experience UQ before you arrive

UQ offers students in years 9-12 access to a wide range of unique practical science experiences, including:

Future Experiences in Agriculture, Science and Technology (FEAST)
4 days, residential

Earth and Environment Day
1 day, on campus

Heron Island and Moreton Bay Research Station Camps
1-5 days (customisable), residential

Student experience

Proactively build your employability with tailored programs and individual consultations that will make you stand out to employers during and on completion of your study. We partner with external employers, alumni, businesses, government and community organisations to create learning and engagement opportunities, including industry placements and internships. Some of the programs you can take advantage of as a UQ student include:

Leadership and Mentoring Program in Science (LaMPS)

Develop your leadership and mentoring capabilities through a series of online modules, on-campus workshops and events, and a residential camp. Learn about the psychology of leadership theory, emotional intelligence, the difference between leadership and management, how to lead yourself and others, and peer mentoring. LaMPS runs in Semester 2 each year and provides a pathway into the Science Leaders Academy.
University-wide scholarships
UQ has a range of scholarships designed to reward the achievements of outstanding school leavers, to identify, support and develop tomorrow’s leaders, and to offer support to students who might not otherwise be able to attend university.
UQ also has a number of other scholarships for both undergraduate and postgraduate students that provide fee relief or financial assistance, which you can apply for even after you have started at UQ.
Keep an eye out for upcoming scholarships related to your study area. There are also scholarships to help with studying abroad, assistance for regional and rural students, and career-specific scholarships.
If you are completing Year 12 in 2020, or you completed Year 12 in 2019 and are on a gap year, you may be eligible to apply for a scholarship.
scholarships.uq.edu.au

Sporting
If you excel in both your chosen sport and academic studies, you may be eligible for a UQ Sporting Scholarship. A range of scholarships are offered in partnership with UQ Sport.
Elite athlete support
UQ is an elite athlete-friendly university, which supports over 200 elite-level student-athletes manage their sport and studies. Dedicated UQ Sport staff, in partnership with UQ, provide academic liaison support to negotiate flexible options for enrolment, assessment and course-related needs.

* Minimum (adjusted) selection threshold 2020 is the minimum score that was considered for an offer of a place to all applicants.
*† Lowest OP/Rank to receive an offer refers to all recent secondary students who were offered a place in 2020.
† QTAC Code CSP = Commonwealth-supported place
*‡ Selected dual programs are currently under review, and durations are subject to change. Visit future-students.uq.edu.au for up-to-date information.
** Not all applicants on this OP/Rank gained entry; finer discrimination within the OP/Rank was used.
*** Students may take the program on a part-time basis, but the final year must be commenced in Semester 1 and must be taken on a full-time basis.
**** UQ has introduced a Situational Judgement Test (SJT) that recognises attributes other than academic performance. See future-students.uq.edu.au
\( * \) Selection based on audition, interview and academic results.

### Prerequisites:

**Before 2019**
- Mathematics A
- Mathematics B
- Mathematics C
- Earth Science

**From 2019 replaced by**
- General Mathematics
- Mathematical Methods
- Specialist Mathematics
- Earth and Environmental Science

---

**Notes:**
- Minimum (adjusted) selection threshold 2020 is the minimum score that was considered for an offer of a place to all applicants.
- Lowest OP/Rank to receive an offer refers to all recent secondary students who were offered a place in 2020.
- QTAC Code CSP = Commonwealth-supported place
- Selected dual programs are currently under review, and durations are subject to change. Visit future-students.uq.edu.au for up-to-date information.
- Not all applicants on this OP/Rank gained entry; finer discrimination within the OP/Rank was used.
- Students may take the program on a part-time basis, but the final year must be commenced in Semester 1 and must be taken on a full-time basis.
- UQ has introduced a Situational Judgement Test (SJT) that recognises attributes other than academic performance. See future-students.uq.edu.au
- Selection based on audition, interview and academic results.
How to study overseas
Studying overseas is an ideal way to enhance your employability while also enjoying the experience of a lifetime. As a UQ student, you can access a range of global experiences, from exchange and short-term study, to international internships, volunteering and opportunities to represent UQ on the global stage. Our UQ Abroad team can help guide you through the application process and get you set for international success.

Student exchange program
Study overseas in your choice of 38 countries for up to one year, while still gaining credit towards your UQ degree. While you’re on exchange, tuition fees at the host university are waived and you’ll continue to pay fees and be enrolled at UQ. You can even apply for exchange scholarships and may be eligible for a government OS-HELP loan to assist with airfares, accommodation, health insurance and living costs.

Short-term experiences
Want to study or live overseas for only a short time? Short-term global experiences are a great way to discover more of the world, develop valuable contacts and make the most of your semester breaks. Many experiences at approved host universities in Asia, Europe, the USA or Latin America are eligible for credit towards your UQ program.

Universitas 21 student experiences
UQ is a member of Universitas 21 (U21), an international network of leading research-intensive universities that work together to enhance the student experience across the world. Apply to participate in a range of U21 student experiences such as short-term Summer or Winter Schools, global competitions, and student exchange, and build your global network of like-minded peers.

Start planning now!
If you’re interested in studying overseas, UQ Abroad offers information sessions throughout the year, or you can speak to an adviser.

See the world
See the potential of the world. Gain the knowledge to make it better.

38 exchange countries
200 exchange partners
75+ short-term programs
1000+ students participating in global experiences

$1.2m+ student funding support for overseas opportunities

8 SCIENCE, MATHEMATICS, AGRICULTURE AND ENVIRONMENT 2021
### Program table explained

**HONOURS**
At UQ, honours may be awarded as a one-year bachelor’s honours degree after you have completed a bachelor’s degree, or as a single bachelor’s honours degree typically taking four years of study. Some undergraduate programs allow eligible students to transfer to a bachelor’s honours degree at a defined point in the bachelor’s degree. This box shows whether honours is available with a program.

**CAMPUS**
One of three UQ teaching sites where the majority of lectures are held.

### QTAC CODE
A unique code number assigned by QTAC to each individual undergraduate university program. You will need to use this number on your QTAC application.

### MINIMUM SELECTION THRESHOLD 2020
**OP / RANK / IB / ATAR**

<table>
<thead>
<tr>
<th>QTAC CODE</th>
<th>Minimum Selection Threshold 2020</th>
<th>LOWEST OP / RANK TO RECEIVE AN OFFER 2020</th>

<td>St Lucia</td>
<td>Additional year of study</td>
<td>Arts, Business Management, Commerce, Engineering (Honours), Mathematics, Science</td>
<td>Queensland Year 12 or equivalent English, Mathematical Methods</td>
</tr>
</tbody>
</table>

**DURATION**
The time it takes to complete a program when it is studied full-time.

- **Full time:** The standard study load is eight units per semester. Full-time study is 75 per cent or more of the standard study load (i.e. six units per semester for most programs).
- **Part time:** Part-time study load is less than 75 per cent of the standard study load (i.e. less than six units per semester for most programs).

### ADJUSTMENT FACTORS
Previously referred to as ‘bonus points’, these are a numerical value added to or used in combination with an OP or selection rank. Common adjustment factors may include subject adjustments, enrichment studies, or educational disadvantage.

- **Adjusted:** The lowest OP or selection rank to which an offer was made to recent school leavers including any adjustment factors that may have been applied.
- **Unadjusted:** The lowest ‘raw’ OP or selection rank to which an offer was made to recent school leavers, excluding any adjustment factors.

**ADMISSION REQUIREMENTS**
Some programs require you to have completed specific subjects (or their equivalent) at school. Some also have additional requirements.
Bachelor of Advanced Science (Honours)

Challenge and develop your critical thinking and analytical skills in this elite four-year program, and prepare yourself for a rewarding career in science research and industry.

Why Advanced Science (Honours) at UQ?

The Bachelor of Advanced Science (Honours) will challenge you and develop your deep interest in science to create the foundation for a high-achieving career in scientific research and industry.

What you will study

In first year, you will learn interdisciplinary approaches to problem solving and build networks with other high-achieving students and research scientists. In second and third years, you’ll develop your quantitative, computational, practical and problem-solving skills through group research projects in preparation for a full-year independent research project in your final year.

Majors

Choose to specialise in:

- **Biological Science**
  - Study life processes and the structure, function, growth, evolution and distribution of living organisms. Explore solutions to issues in the global agriculture, health and medicine sectors, and the management of sensitive environments.

- **Biomedical Science**
  - Explore physiology, pharmacology, anatomy, developmental biology, human genetics, neuroscience, human immunology and infectious diseases in preparation for a career in fundamental or clinical research.

- **Chemistry**
  - Explore the structures and properties of molecules and materials, and new ways to use them in biochemistry, engineering, food science, materials science, nanotechnology and medicine.

- **Geographical Sciences**
  - Study the spatial patterns and interactions of physical and human phenomena at local, national and global scales, and how they change over time.

- **Geological Sciences**
  - Examine the interactive system of the solid Earth, atmosphere, hydrosphere and biosphere through hands-on mineral and rock analysis, practical field mapping and advanced geophysics, geochemistry and subsurface modelling courses.

- **Mathematics**
  - Deepen your mathematical understanding and combine it with modelling and computational skills to solve problems in the physical and biological sciences, engineering, information technology, economics and business.

- **Physics**
  - Explore the principles governing the structure and behaviour of matter, the generation and transfer of energy and the interaction of matter and energy; and then apply them in your theoretical, experimental or applied research.

- **Minors**
  - Choose from 22 minors to expand your knowledge in an additional area.

- **Placements and practical experience**
  - After developing cutting-edge practical research skills in your first three years, you will apply them to an extensive research project in your fourth year. This will give you in-depth skills for a research career, as well as problem-solving techniques and critical thinking, writing and communication skills that are in demand in both academic and corporate sectors.

Careers

You will find expanding career possibilities in diverse roles within the government, health, corporate, environmental and financial sectors and in research organisations globally. Advanced Science is also an excellent pathway into medicine or a research higher degree such as a PhD.

**SAMPLE COURSES**

- Advanced Biochemistry and Molecular Biology
- Advanced Bioinformatics
- Advanced Genetics
- Advanced Techniques in Biomedical Science
- Advanced Organic Chemistry
- Advanced Physical Chemistry
- Advanced Earth Observation Sciences
- Advanced Structural Geology
- Advanced Geophysics
- Condensed Matter Physics: Electronic Properties of Crystals

Diploma of
Agribusiness Management

Use this one-year full-time diploma to prepare yourself for a range of careers in the rural business and technical fields of agriculture through a nationally accredited program which combines vocational units of competency and applied practical and required theory.

Why Agribusiness Management at UQ Skills?
Whether you are a school leaver, mature age student or seeking a career change, you can choose this program to gain the higher technical skills and business-related knowledge to move into a middle-management career in a rural enterprise or to formalise skills gained through previous work experience.

At UQ Skills you will access world-class agricultural and animal science facilities at UQ's Gatton campus and undertake vocational training delivered by leading industry experts who are recognised nationally in their fields.

As a 1068-hectare farm enterprise, on-campus facilities include dairy, pig and poultry units, cropping and plant nursery, beef cattle teaching facility, post-harvest facilities, equine unit, research laboratories, tractor and quadbike training facility, greenhouses, a wide range of plant and farm machinery, sheep and goat herds, veterinary facilities and a farriery.

With a combination of vocational training and academic teaching, you will be equipped to manage a range of operations in the increasingly technical global agricultural sector and apply strategies to analyse information and undertake complex decision-making.

What you will study
The one-year full-time program is a vocational-only diploma award delivered via on-campus and classroom lectures combined with practical and field experience to ensure you have the best learning environment to meet the vocational assessment standards for competency.

You will complete 10 units of competency to develop your applied practical and required theory, and gain skills in writing and communications, plus core knowledge in personnel and farm management, the operation of rural production systems and business practices, natural resource management, issues affecting production and global markets, finance, occupational health and safety and business planning.

During the year, you will undertake lectures and practicals, and on completion of these units you will be industry-qualified and also well prepared to pursue higher education options within the university sector, subject to meeting any program entry requirements.

VET Student Loan
UQ Skills is an approved VET Student Loans provider and, if you are eligible, you can apply for a loan to pay your Diploma fees up to capped amounts through the Commonwealth Government's VET Student Loans scheme – visit education.gov.au/vet-student-loans

Queensland Government subsidies
You may also be eligible for subsidies funded by the Queensland Government. To ascertain your eligibility please go to Queensland Skills Gateway and follow the links: Am I eligible?
For more information visit UQ Skills website at skills-training.uq.edu.au.

Bachelor of Agribusiness

Discover the commercial world behind agriculture and the complex and rapidly changing distribution and communication channels linking producers with consumers, in one of the leading agribusiness programs in the country.

Why Agribusiness at UQ?

Agribusiness drives the entire supply chain, from the seeds that grow crops to the machines that harvest them, all the way through to the retail marketing of food and fibre. It focuses on businesses that underpin the agricultural industry, both in Australia and overseas. Creating innovative, value-added food and fibre products, and managing inputs such as agricultural chemicals, fertilisers, machinery, human resources, and financial and advisory services for businesses in the supply chain, agribusiness plays a vital role in the global economy. It also contributes to the commercialisation of new biotechnologies and information technologies to improve the production and marketing of food and fibre products.

Study Agribusiness at UQ and prepare yourself for a business career in the rapidly changing agricultural industry.

This Agribusiness program has been developed in close and ongoing collaboration with the international and Australian agricultural sector to prepare you for a career in global agriculture. You will be taught by internationally ranked business experts, ensuring you receive the most relevant, up-to-date knowledge and practical experience.

What you will study

Learn to market, finance and manage people and technology along the agrifood value chain linking producers with consumers. You will acquire knowledge of agricultural value chains and all the business disciplines that apply in agribusinesses including domestic and international marketing, commodity trading, human resource management, finance, supply chain management, sustainability and the e-technologies increasingly being used to drive efficiency in agriculture. Tailor your studies through your elective courses towards your preferred career path. Note: First year requires attendance at both St Lucia and Gatton; subsequent years are based at Gatton. Your courses at St Lucia are taught by the UQ Business School, and courses at Gatton are through the School of Agriculture and Food Sciences, both highly ranked worldwide in the business and agricultural sectors.

Placements and practical experience

During your first two years, practical experiences can include case studies, research projects and agribusiness site visits. In your final year, you will undertake a major group project with an agribusiness organisation, working collaboratively as a member of a small team to address the client’s brief. Your project will focus on commercial outcomes and may include international market research. Regardless of the project undertaken, it will provide an excellent opportunity to apply your business skills and knowledge gained throughout the program in a real-life business context.

Dual programs

Study the Bachelor of Agribusiness as a dual degree with a Bachelor of Agricultural Science (majoring in Agronomy, Animal Science or Horticulture), Bachelor of Equine Science, Bachelor of Veterinary Technology, or Bachelor of Wildlife Science. Combine your practical business skills with your interests in any of these four disciplines.

Career opportunities

On graduation you will be internationally oriented and job ready for positions in the agricultural industry in managerial, administrative or research roles related to agribusiness management and research; agropolitics; banking, finance, investment and insurance; commodity trading, sales and marketing; export marketing and management; Australian and international government agencies and departments; policy development and analysis in agricultural and regional agencies; property management; supply chain management and tourism.

SAMPLE COURSES

Accounting for Decision Making
Agrifood Strategy and Competitiveness
Agribusiness Planning and Management
Applied Market Research
Commodities, Futures and Options
Export Marketing and Practices
Food and Fibre Case Studies I, II and III
Food and Fibre in the E-Landscape
Foundations of Marketing
Introduction to Human Resource Management
Investment Project Appraisal
Sustainable Food Supply Chains

For more information

Agricultural Science

Use your scientific, technological and practical expertise to improve the productivity, competitiveness and sustainability of agricultural practices beyond traditional cropping and animal production.

Why study Agricultural Science at UQ?

At UQ you will learn from world-class academics with an active research focus and strong industry connections. They’ll teach you to apply and integrate the scientific, technological, managerial, economic and social principles of agriculture to improve livestock and cropping outcomes for small, medium and large-scale farming operations.

Enhance your skills with an optional 120-hour practical industry placement to build a strong understanding of the current and emerging trends in agricultural innovation. Graduate with an internationally respected work-ready qualification or undertake an additional year of independent honours research to focus on a specific topic.

What you will study

Gain a strong understanding of the complexity of the agricultural sector and then specialise in one of three majors:

Agronomy

Learn to manage the environment and agricultural practices to control the plant growth and crop production cycle. Combine the study of biological, chemical, ecological and earth sciences or genetics to examine variables such as crop rotation, irrigation and drainage, plant breeding, plant physiology, soil classification and fertility, and the control of weeds, insects and other pests to manage the whole cycle.

Animal Science

Study the science of animal production and the management of beef and dairy cattle production, poultry, sheep, goat and pig production. You will learn animal nutrition and reproduction, animal health, animal breeding and genetics, animal behaviour, microbiology, anatomy and physiology, and biochemistry and pasture science. Your practical classes will access some of the best animal science and research amenities in the Southern Hemisphere.

Horticulture

Focus on the intensive production of fruit, vegetable, nursery and floricultural crops; and the use of plants for recreational and therapeutic benefit, to enhance the urban landscape. As a horticulturist, you will improve plant yield, quality, nutritional value and resistance to insects, diseases and environmental stresses using scientific techniques in plant breeding, biochemistry, physiology and propagation.

Or combine any two of these areas into a double major to become a broadacre farming specialist.

Double your opportunities

Improve your employment prospects and broaden your skills and knowledge by combining your Bachelor of Agricultural Science with an Agribusiness program.

Careers

Work in local, national and international organisations to solve major challenges such as climate change, food security and the sustainable production of food and fibre for global consumption. Take on roles such as agronomists and horticulturalists promoting profitable and sustainable crop cultivation; geneticists or soil scientists in government or industry; agricultural consultants; extension and inspection officers or advisers for producers and companies; farm managers for national and international agribusiness companies and total industries; advisers or resource consultants for banks and financial organisations; land information systems officers and government policy regulators.

* Minimum (adjusted) selection threshold 2020 is the minimum score that was considered for an offer of a place to all applicants.

* Lowest OP/Rank to receive an offer refers to all recent secondary students who were offered a place in 2020.

SAMPLE COURSES

General
- Biological Concepts and Plant Science
- Applied Mathematics and Statistics
- Agricultural Biochemistry
- Elements of Ecology

Agronomy
- Plant Production Principles and Technologies
- Crop Physiology
- Plant and Environmental Health
- Plant Physiology

Animal Science
- Animal and Plant Biosecurity
- Monogastric Production Systems
- Animal Nutrition
- Pasture Science

Horticulture
- The Soil Environment
- Horticultural Science
- Plant Production Principles and Technologies
- Soil Plant Relationships

Biomedical scientists are at the forefront of modern healthcare

Bachelor of Biomedical Science

Study the latest in globally relevant biomedical practices, and gain the theoretical and hands-on skills to prepare yourself for a dynamic career in an industry that’s making incredible advances in modern medical science.

Why Biomedical Science at UQ?
Biomedical scientists assist in developing treatments for diseases, by carrying out clinical tests, evaluating the effectiveness of treatment, and researching the causes and cures for disease.

Learn from leading UQ researchers at the forefront of developments in biomedical science and integrate your interdisciplinary studies to graduate with a well-grounded and wide-ranging knowledge of this field.

What you will study
During your first two years, you will cover the broad areas of molecular and cellular biology through to body systems, and learn the scientific process by experimental design, hands-on experiments and computer modelling. In your third year, choose to specialise in one or more areas of study.

Your areas of study
Courses focusing on molecular and cellular biology

Biochemistry and Molecular Biology
Gain the research tools to address questions on how cells divide, grow, communicate and die, and understand the structure, function and interactions of nucleic acids, proteins, carbohydrates and lipids, and their contribution to cellular activities and processes.

Developmental Biology
Learn how organisms and cells grow and develop organs and tissues using their genetic blueprint, which is central to understanding the basis of human health and disease.

Human Genetics
Use essential statistical and mathematical skills to study the human genome, contribute to the ethical debate on the use of genetic information and be part of future discoveries.

Immunology and Infectious Diseases
Examine the principles of immunological responses to infectious diseases and study the biology of microbes such as bacteria, fungi and viruses to understand how new vaccines and therapeutic treatments are developed.

Courses focusing on body systems
Anatomy
Understand human anatomy through the collection and evaluation of anatomical data and gain insights into human variation in health and disease. Perform tissue dissection to learn about the musculoskeletal, nervous and visceral systems.

Neuroscience
Study the nervous system, which is responsible for integrating, processing and coordinating sensory information and motor commands, and learn how neuroscience and neural stem cells are being used to treat neurological and mental illnesses.

Pharmacology
Learn how drugs impact the functioning of the human body and how pharmacologists are improving disease therapies through development of new drugs or better use of existing drugs.

Physiology
Investigate normal bodily processes and the changes occurring in disease. Apply your knowledge at the molecular and cellular levels to understand the integrative control of tissues, organs and systems.

Practical experience
For more than half of your program, you will apply theory to practice through practical laboratory-based experiments.

Careers
Find a career in hospital and diagnostic clinical laboratories, biotechnology and pharmaceutical companies, laboratory work in molecular and cellular biology, health policy, and communication in government or advisory organisations. This degree is an excellent pathway into postgraduate health programs, including the Doctor of Medicine.

SAMPLE COURSES
- Analysis of Scientific Data
- Biochemistry and Molecular Biology
- Cell Structure and Function
- Differentiation and Development
- Genetics
- Human Anatomy
- Microbiology and Immunology
- Principles of Pharmacology
- Systems Physiology

uq.edu.au/sbms
science.uq.edu.au/planner

See also information on the Biomedical Science major in the Bachelor of Advanced Science (Hons) on page 10 and the Biomedical Science major in the Bachelor of Science on page 25.
Why Biotechnology (Honours) at UQ?
Study biotechnology at UQ and you will be equipped with advanced skills in applied biotechnology for a career in research or industry. You will study microorganisms, plants and/or animals and learn how to translate scientific knowledge into biotechnology products and services through extensive, hands-on laboratory experience and practical product-development skills, while learning from Australia’s leading educators in biotechnology.

Biotechnology has resulted in new innovations such as the rapid diagnosis of infections like SARS and exotic influenzas, or inherited diseases such as cystic fibrosis; genetic engineering in plants and animals to improve yield, vitamin content or pest resistance; biological drugs using computational, recombinant DNA and antibody engineering techniques; biomaterials for tissue and organ replacement; DNA fingerprinting to confirm parentage or livestock pedigree; or in forensic applications and using bacteria to clean up oil spills.

What you will study
You will receive a strong foundation in molecular genetics, bioinformatics, microbiology, immunology, biochemistry, cells and genes, physics, chemistry, engineering, mathematics, and other essential subjects to understand the biotechnology sector. You will complete core technical skill courses offered in UQ’s Bachelor of Science and learn about commercial and intellectual property concepts important in the development of new biotechnology products. Your fourth year is taken at honours level, when you can choose either a research focus that addresses both fundamental and applied technical issues or a business and entrepreneurship focus for a career in new product development.

Single majors
- Bioinformatics
- Bioprocess Technology
- Chemical Biotechnology
- Drug Design and Development
- Microbial Biotechnology
- Molecular Biotechnology
- Nanotechnology
- Plant Biotechnology

Dual major
Study Innovation Management as a dual major with any of the single majors to combine your scientific skills with business knowledge to manage commercial outcomes from biotechnology research.

Placements and practical experience
Choose a Student Industry Placement or Internship and undertake a project to solve a technical or operational problem and produce a report on your findings. Find more information at scmb.uq.edu.au/industry-placements.

Careers
In Australia, the expanding biotech industry has more than 850 companies operating in sectors including health, agriculture, chemical, pharmaceutical, diagnostics, environment, forestry, law and commerce, with employment also offered in research organisations and startup ventures. This degree is an excellent pathway into postgraduate health programs, including the Doctor of Medicine.
Bachelor of Environmental Management (Honours)

Tackle complex global issues like climate change, pollution and land clearing. Discover how to critically assess the causes of environmental problems and develop better ways of managing and solving them.

**Why Environmental Management (Honours) at UQ?**

Learn from experts on how to manage the environmental challenges faced locally and globally and address the sustainability of natural environment and resources. You will gain a foundation in environmental sciences with the added focus on social and economic disciplines, decision-making, problem-solving and policy analysis.

**What you will study**

In the first two years of study, you will gain a sound understanding of the natural sciences. You will learn how to manage complex environmental problems through techniques and approaches to integrate biophysical, social, cultural, economic, legal and management factors. In your third year, you will undertake a two-week field trip to investigate environmental management practices in a variety of contexts, and complete an industry placement to refine your understanding and skills in environmental management. In your final year, you will integrate and apply the research, core knowledge and skills acquired in your first three years and develop your ability to manage complex real-world problems that affect a range of natural or urban environments. If you are eligible, you can elect to undertake an individual research thesis in your fourth year or choose to undertake the industry-oriented group research project. Learn scientific, social, economic and managerial strategies to reduce the effect of industry and urban development on the environment and implement ways to reduce or eliminate existing and potential environmental concerns. Develop multidisciplinary skills in environmental management, decision-making and problem-solving with a focus on urban, industrial and rural environments. Tackle complex global issues like climate change, pollution and land clearing. Discover how to critically assess the causes of environmental problems and develop better ways of managing and solving them.

**Placements and practical experience**

In your third year, you will undertake a full semester of placement and practical experience. Apply your knowledge and skills during a compulsory two-week field trip to observe environmental management in practice, and network with practitioners in government and industry. For the remainder of the semester you will participate in an industry placement program, and undertake a supervised project in environmental management. In your final year, an in-depth research project or case study in conjunction with an external client will allow you to apply your knowledge and skills to a real-life environmental problem. As part of your studies, you can participate in a variety of field trips to a diverse range of environments across Queensland, and field trips to international locations, including Indonesia, Vietnam and Hong Kong. Use these components of the program to actively develop your connections with potential employers and industry and gain hands-on and practical skills to ensure that you will be industry-ready.

**Careers**

You will find employment in managerial, research, administrative and education roles within consultancies, mining companies, government departments, landcare and catchment management groups, and national and international non-government organisations. Opportunities are available in a variety of sectors, including:

- national parks and wildlife conservation
- sustainability advising
- environmental assessment and compliance
- natural resource management
- policy development
- government and commercial consultancies in environmental planning and management
- mining and resources industry
- environmental tourism
- environmental management.

**SAMPLE COURSES**

- Carbon and Energy Management
- Cultural Heritage Management
- Sustainable Development
- Environmental Impact Assessment
- Environmental Problem Solving
- Geographical Information Systems, Climatology and Hydrology
- Physical and Biological Oceanography
- Wildlife Management

For more information see future-students.uq.edu.au and science.uq.edu.au/planner.
Bachelor of

Environmental Science (Honours)

Enhance your scientific knowledge of resources, ecology and conservation, environmental toxicology, or natural resource science with extensive practical experience opportunities to investigate and solve global environmental problems.

Why Environmental Science (Honours) at UQ?

Study environmental science at Australia’s most highly ranked university for research in environmental sciences and benefit from UQ’s local, national and global networks. This program will equip you with the knowledge and practical skills to understand the impacts of climate change and how to devise strategies to improve sustainability, manage ecosystems, preserve global biodiversity, and secure clean water and food.

Learn how to address the many challenges arising from diminishing natural resources and degrading environments. You will combine your scientific skills with knowledge of the legal, political and social aspects of environmental management as well as undertaking extensive practical, field and research experiences to become a skilled environmental scientist.

What you will study

Choose to specialise in one of four majors:

- **Earth Resources**
  - Study the physical and geological environment and develop knowledge and skills to minimise the impact of extraction of minerals, fossil fuels, water and other resources.

- **Ecology and Conservation**
  - Develop your multidisciplinary skills in environmental management, decision making and problem solving to assist companies and governments to minimise conflict between growth and development and the environment.

- **Environmental Toxicology**
  - Focus on the problems associated with existing and emerging environmental toxins to address the risks to environmental and human health and implement regulation.

- **Natural Resource Science**
  - Study the way environmental processes can be described, monitored and predicted, and the effect of human impact on the physical and biological environment to devise solutions for a sustainable future.

Placements and practical experience

Undertake extensive practical experience to develop your skills to deliver a range of environmental strategies, solutions and programs. You will participate in excursions, field-based activities and research opportunities in diverse subtropical and tropical ecosystems including World Heritage rainforests, the Great Barrier Reef, North Stradbroke Island and outback Australia.

Careers

Find employment in organisations undertaking environmental monitoring, impact assessment and management; policy development in government agencies; mining; environmental tourism; sustainability advice and natural resource management; and teaching or research.

**SAMPLE COURSES**

- Earth Resources
- Climatology and Hydrology
- Field Geology
- Mineralogy
- Physical and Biological Oceanography
- Ecology and Conservation
- Ecology
- Outback Ecology Field Studies
- Zoology
- Environmental Toxicology
- Environmental Toxicology and Monitoring
- Integrative Cell and Tissue Biology
- Medicinal and Biological Chemistry
- Natural Resource Science
- Ecology
- Plant Biology
- Soils, Landscapes and Environments

Bachelor of Equine Science

Transform your passion for horses into a career. Focus on strategies to improve management, performance and welfare across the global equine industry.

Why Equine Science at UQ?
You will be introduced to the scientific and practical aspects of the fast-growing global equine industry. Learning from UQ's internationally regarded equine academic staff, you will acquire skills to improve outcomes for horses, riders and the equine industry. You will have access to an extensive range of equine facilities at our Gatton campus, which include equitation arenas (show jumping and dressage), breeding and horse-handling facilities, day yards and stabling amenities. Study this program either internally (on campus), or externally (off campus). The practical components for external students may be completed during extensive on-campus residential schools. Note that the external option is not available to international students studying in Australia on a student visa.

What you will study
In your first year, you’ll build a strong understanding of animal biology, structure and function, as well as chemistry. In your second and third years, you will specialise in agricultural biochemistry, microbiology and its relationship to health and disease, horse behaviour, physiology, biomechanics, breeding, nutritional physiology and diet. As you progress through the program, choose from a range of electives, including agribusiness, biosecurity, pasture and production courses. You will graduate with scientific knowledge and practical skills that can be used in all aspects of the equine industry to improve the management, performance and welfare of all horses.

Dual program
You can study the Bachelor of Equine Science as a four year dual degree with the Bachelor of Agribusiness to combine practical business skills with your interest in equine science.

Placements and practical experience
During the program you will work extensively with horses from the UQ Australian Stock Horse stud, in conjunction with UQ’s expert instructors and lecturers. You will also be able to participate in a three-week tour of equine and production animal facilities in Kentucky and Texas, USA. You might also join the UQ Equestrian Club, which is part of UQ Sport. Further hands-on training is available by including a vocational program with your studies, or taking part in extended industry placements. You can also bring your own horse to agist at the Gatton campus.

Get additional skills
You can broaden your skill set by concurrently enrolling in the Certificate III in Rural Operations or the Farm Ready program through UQ Skills (details available at bit.ly/uq-skills-courses).

Careers
As an equine specialist, you will establish a career in:
- equine industry organisations and educational institutions
- equine journalism
- horse studs
- preconditioning and training businesses
- racing and competition stables
- sales and marketing
- statutory bodies administering racing and trotting

You can also choose to pursue a research career by undertaking a research honours year, which could lead to postgraduate studies.

Why not pursue a career in:
• equine industry organisations and educational institutions
• equine journalism
• horse studs
• preconditioning and training businesses
• racing and competition stables
• sales and marketing
• statutory bodies administering racing and trotting

The horse industry is worth over $6 billion annually to the Australian economy.
Why Mathematics at UQ?
Mathematicians and statisticians combine their knowledge with modelling and computer technology to solve problems in the physical and biological sciences, engineering, information technology, economics and business. UQ’s mathematics research and industry networks will widen your career options and help you excel in the mathematical aspects of other disciplines.

What you will study
You will gain quantitative and analytical skills and a foundation of calculus, linear algebra, discrete mathematics, mathematical analysis and modelling. You will develop a deep knowledge of mathematical topics and a high level of sophistication in the application of mathematics across a variety of fields and industries. Specialise your studies with a major, or diversify your study with a minor or a dual program and graduate with two degrees with only one extra year of study.

Majors
Applied Mathematics
Focus on the derivation and evaluation of models applied in the physical, biological and engineering sciences, and other fields such as financial mathematics.

Data Analytics and Operations Research
Develop skills in analysing large and complex data sets and learn how to make effective decisions using optimisation techniques.

Mathematical Physics
Explore the mathematical foundations of modern physical theories and gain a mathematical understanding of contemporary science, including statistical mechanics, relativity and the quantum theory of systems.

Pure Mathematics
Examine the intrinsic nature and fundamental properties of mathematical concepts, and expand your appreciation of the ubiquity, universality and beauty of mathematics while developing high level skills in critical, analytical and abstract thinking.

Statistics
Acquire the mathematical foundations and techniques necessary to understand and deal with chance and uncertainty through the design, collection, analysis and interpretation of data.

Minors
Combine your chosen major with a minor in Bioinformatics, Computer Science or Physics.

Placements and practical experience
Undertake a summer research project or internship through the School of Mathematics and Physics. Undergraduate research scholarships are available through UQ and some industry groups.

Careers
Demand for quantitatively trained graduates is at an all-time high and you will be sought by industry for your excellent problem-solving abilities. You will gain a wide range of rewarding positions in finance, economics, mathematical research, statistics, actuarial studies, quantitative finance, meteorology, information technology, data science and teaching.
**Bachelor of Occupational Health and Safety Science (Honours)**

As the world focus on workplace safety and regulations increases, demand for OHS graduates is also increasing.

---

**Why Occupational Health and Safety Science (Honours) at UQ?**

This unique program combines studies of health, psychology, law, ethics and management with practical skills through placements, worksite visits and industry experience. You’ll learn scientific approaches to identifying, assessing and controlling chemical, physical and biological hazards. You’ll also learn about psychosocial health factors, like stress, bullying, harassment and fatigue. With these key skills, you will be able to monitor and modify work environments, deliver education programs, analyse workplace data, devise, evaluate and implement OHS management systems, undertake OHS auditing and inspections, complete accident investigations and ensure compliance with legislation.

---

**What you will study**

You will study occupational hygiene, ergonomics, occupational health, safety science and risk management. Your first year of study will incorporate a strong basis in the foundation sciences and interaction with OHS professionals. You’ll learn scientific approaches to identifying, assessing and controlling chemical, physical and biological hazards. You’ll also learn about psychosocial health factors, like stress, bullying, harassment and fatigue. With these key skills, you will be able to monitor and modify work environments, deliver education programs, analyse workplace data, devise, evaluate and implement OHS management systems, undertake OHS auditing and inspections, complete accident investigations and ensure compliance with legislation.

---

**What you will study**

You will study occupational hygiene, ergonomics, occupational health, safety science and risk management. Your first year of study will incorporate a strong basis in the foundation sciences and interaction with OHS professionals. You’ll learn scientific approaches to identifying, assessing and controlling chemical, physical and biological hazards. You’ll also learn about psychosocial health factors, like stress, bullying, harassment and fatigue. With these key skills, you will be able to monitor and modify work environments, deliver education programs, analyse workplace data, devise, evaluate and implement OHS management systems, undertake OHS auditing and inspections, complete accident investigations and ensure compliance with legislation.

---

**Placements and practical experience**

In your final year, you will complete a minimum of 480 hours of placement with one or two industry partners to ensure you are qualified and prepared to enter the workforce with diverse employment opportunities as employers worldwide recognise your skills and practical knowledge.

---

**Careers**

OHS professionals with sound scientific knowledge are in short supply and high demand. You will be ready to work in remote, rural or urban regions in government, consultancy or the private sector, with roles in areas such as mining, agriculture, retail, hospitality, construction, transport, manufacturing and healthcare. Roles in large organisations and consulting firms offer mentoring by senior OHS staff, and travel within Australia and overseas. Comparatively, solo positions offer hands-on experience across the full range of OHS issues and expose you to other business activities, such as human resources and production.

---

**Sample Courses**

- Integrated Anatomy and Physiology
- Introduction to Human Factors
- Introduction to Psychology: Minds, Brains and Behaviour
- Occupational Health
- Occupational Health and Safety Law
- Occupational Health and Safety Management Systems
- Occupational Hygiene (I and II)
- Occupational Safety Science
- Physical Ergonomics
- Professional Practice and Emerging Issues in Occupational Health and Safety
- Research and Evaluation of Interventions in OHS
- Risk Management

---

"The broad field of studies covered in the program has set me up to address many different workplace scenarios that I may come across throughout my career as an OHS professional."

**Whitney Evans**
Bachelor of Occupational Health and Safety Science, Health, Safety and Environment Consultant Prensa Pty Ltd

**Minimum of 480 hours of industry placement in your final year**
Bachelor of Science

Develop your interdisciplinary scientific knowledge and the key practical skills to address today’s global challenges. With a wide range of majors to choose from, this flexible program gives you the freedom to find or follow your scientific passion and to pursue your career goals.

Why Science at UQ?
UQ’s Bachelor of Science (BSc) will give you the perfect balance of a defined sequence of study combined with flexible course options. With a choice of 23 majors, you can study an extensive range of courses supported by innovative research to graduate with superior technical skills, and advanced independent thinking and communication skills. Use this range of courses to tailor the program to your individual interests and career goals. Select course combinations from science and non-science disciplines in your first year, then in your second and third years focus on one or two specialist areas (majors) to deepen your knowledge.

Bachelor of Science with Honours
As you near the end of your BSc, you may consider applying for an honours program. Honours is an additional year of study that is essentially a research apprenticeship for a young scientist. You will work under the guidance of a researcher on a specific project of interest to them, and learn about the research environment, how to perform critical experiments and analyse data, and how to communicate and present your results. UQ Science Honours graduates are in high demand by employers due to their ability to work independently.

Bachelor of Science major at Gatton
If you choose to study the Animal and Veterinary Bioscience major, you will access the exceptional teaching and research facilities at the Gatton campus. Animal and Veterinary Bioscience will provide you with a solid biological foundation for a career in scientific research, the animal bioscience industry and related sectors. Select this major to progress into the Bachelor of Veterinary Science.

Double your opportunities

Improve your employment prospects and broaden your skills and knowledge by studying two programs at the same time.

As the world around you changes, new and fascinating career opportunities are created every day, and job roles increasingly combine multiple disciplines.

BSc + another bachelor degree

Enrol in a dual program to complete two degrees in a shorter time than completing each program separately. You will have the flexibility to study two areas of interest at once, extend your knowledge and skills to broaden your career opportunities, and gain a competitive employment edge. Note: The dual program option is not currently available for the Gatton major.

Applying for a dual program

Dual programs at UQ have unique program codes, and you must satisfy prerequisite and entry score requirements. Domestic applicants must apply through the normal QTAC application process. International applicants should visit future-students.uq.edu.au for application details.

Transferring to a dual program

Once you have started your BSc, you can transfer to a dual program by requesting a program change or applying through QTAC. Faculty of Science academic advisers can provide further information about the best options to suit your individual needs.

Study a Bachelor of Science in combination with:

- Arts
- Biomedical Science
- Business Management
- Commerce
- Computer Science
- Economics
- Education (Secondary)
- Engineering (Honours)
- Information Technology
- Journalism
- Laws (Honours)
- Mathematics
- Music (Honours).

A dual program, also called a double degree, will equip you for this evolving job market. It gives you the flexibility to study two different disciplines in a much shorter time, by studying only the mandatory courses for each program with fewer or no electives.

* Selected dual programs are currently under review, and durations are subject to change. Visit future-students.uq.edu.au for up-to-date information.
* Minimum (adjusted) selection threshold 2019 is the minimum score that was considered for an offer of a place to all applicants.
* Lowest OP/Rank to receive an offer refers to all recent secondary students who were offered a place in 2019.
* Not all applicants on this OP/Rank gained entry; finer discrimination within the OP/Rank was used.
** Students may take the program on a part-time basis, but the final year must be commenced in Semester 1 and must be taken on a full-time basis.
*m Selection based on audition, interview and academic results.

Save time
Graduate with two bachelor’s degrees in as little as four years – a much shorter time than it would take to study both programs separately.

Strike a balance
Why compromise when you can balance your studies and your sanity by pursuing both your career ambitions and passions? Dual program students appreciate the diversity of topics offered in their two different programs.
The UQ BSc program is recognised as excellent preparation for studying Medicine and to advance into a medical career. Alternatively, the UQ BSc offers a pathway to improve your entry rank for programs such as Engineering, Veterinary Science or Pharmacy. By completing a year of full-time study in the BSc, you can use your level of achievement at university (your Grade Point Average or GPA) as a way to meet the higher entry requirements of other programs. In some cases, you may gain credit into your new program for courses completed in the BSc. If you are planning to use the BSc to improve your entry rank, you should always seek advice on the GPA required to allow you to transfer into your chosen program, as entry into some programs – particularly in the health sciences and veterinary science – is very competitive. See your academic adviser early in your studies so they can help you keep all your options open and carefully plan your first year to make sure that, if you are unsuccessful in transferring to your chosen program, you can still continue in the BSc.

Using the BSc as your Pathway

The BSc is popular both as a pathway to Medicine, or as a way to improve your entry rank for programs such as Engineering, Veterinary Science or Pharmacy.

Bachelor of Science Majors

How do I choose an area of specialisation in the BSc?

In the BSc, you will complete a specialisation – whether it is a major, an extended major or a dual major – in your chosen area of science. Tailor your BSc study plan according to your interests and explore the flexibility to incorporate one-third of your courses from other UQ programs.

What is the difference between a major, an extended major and a dual major?

A major is an area of specialisation focusing on a single discipline within a program. For example, Chemistry is a major within the Bachelor of Science. An extended major is similar to a major but contains more courses and provides greater depth in that area of study. A dual major is a combination of two different disciplines.

Dual Majors

• Food Science and Nutrition

Majors – St Lucia

• Archaeological Science*
• Biochemistry and Molecular Biology
• Bioinformatics
• Biomedical Science*
• Chemistry
• Computer Science*
• Ecology
• Food Science and Technology*
• Genetics
• Geographical Sciences
• Geological Sciences*
• Marine Biology**
• Marine Science
• Mathematics*
• Microbiology
• Physics*
• Plant Science
• Psychology*
• Public Health***
• Statistics
• Zoology

* Also available as an extended major.
** Only available as an extended major.
*** This major is taught at St Lucia and Herston.

Hannah Wauchope
Bachelor of Science (Honours) (Zoology and Ecology), PhD candidate Cambridge University, UK

“My time at UQ gave me the best possible start in working in the field of conservation science. I got to meet and work with many world leaders in the field, see what it’s like to be a scientist as a career and started doing globally applicable research straight away.”

SCIENCE, MATHEMATICS, AGRICULTURE AND ENVIRONMENT 2021 23
ANIMAL AND VETERINARY BIOSCIENCE

What you will study
Companion animals, production animals and wildlife have important ecological, economic and social roles, and contribute to human health and wellbeing. Study Animal and Veterinary Bioscience to learn how animals function, behave and reproduce, and how to improve their health and welfare, and interaction with humans. Animal and Veterinary Bioscience studies combines training in fundamental biological disciplines such as chemistry, biochemistry, anatomy and physiology with courses that examine animals specifically from the molecular to whole animal and animal population levels. Second and third year courses offer more applied training opportunities that develop your practical and problem-solving skills. The Animal and Veterinary Bioscience major can also be a pathway into the Bachelor of Veterinary Science (Honours) at UQ and is the only major at UQ providing direct credit into that program based on courses completed.

Careers
You will find employment in roles as an animal production, health and wellbeing consultant; animal nutritionist; biosecurity officer/consultant; conservationist; industry regulator in government agencies or research scientist.

Also available as an extended major.

SAMPLE COURSES
Animal and Plant Biosecurity
Animal Pathogens and Immunity
Animal Reproduction
Emerging Issues in Animal Biosciences
Laboratory Animal Science
Molecular and Quantitative Genetics
One Health: Animals, the Environment and Human Disease

ARCHAEOLOGICAL SCIENCE

What you will study
Archaeology increasingly uses scientific approaches and ways of thinking that have revolutionised research into globally significant issues such as human evolution and dispersal, the development of civilisation, and human–environment relationships. Archaeological science techniques also underpin professional archaeology, which is a significant area of the cultural heritage industry.

Combine your core archaeology skills with geography, earth science, biology, chemistry or psychology and engage in practical and field-based courses, from surveying and digging to post-exavation analysis, with the opportunity to participate as a volunteer on lab and field-based research projects. UQ is recognised as a leader in this discipline and you may also participate in UQ-organised excavation field-based research digs in Australia and overseas (currently located in Turkey, East Africa and Hawaii).

Careers
You will find employment in commercial consulting, university teaching and research, government, museums and forensic science.

SAMPLE COURSES
Advanced Research in Archaeology
Animals and Archaeology
Biogeography and Geomorphology
Managing Cultural Heritage
Field Archaeology
Historical Archaeology
Palaeobiology
Forensics: the Archaeology of Death and Crime Scenes

BIOCHEMISTRY AND MOLECULAR BIOLOGY

What you will study
Biochemistry and molecular biology studies the chemical basis of life and underpins all disciplines of biology. You will study the molecular events controlling the growth and development of cells and organisms in all living things. Your lecturers are experts who will help you gain an understanding of how molecular events can go wrong in certain disease states and how this contributes to the development of new drugs. Through practicals, structured tutorials and specialised seminars you will discover the relevance of biochemistry and molecular biology to research and development in medicine, the environment, agriculture, proteomics, genomics, bioinformatics, biotechnology, genetic engineering and drug design.

Careers
You may work in the agriculture, health, biotechnology or environmental sectors or find employment as a research biochemist or molecular biologist in pharmaceutical development laboratories in universities, research institutes and companies investigating the molecular networks controlling normal biological processes and defective processes associated with disease affecting animals and plants. Using the latest genetic engineering and molecular-biological techniques, you may contribute to the development of new approaches to diagnose and treat diseases.

SAMPLE COURSES
Biochemistry of Metabolism in Health and Disease
Cell Structure and Function
Cells to Organisms
Chemical Biology
Genomics and Bioinformatics
Human Molecular Genetics and Disease
Molecular Cell Biology
Molecular Systems Biology
BIOINFORMATICS

What you will study
With rapid advances in computing and increasing amounts of biological information generated by emerging technologies, bioinformatics is changing how we make scientific discoveries and interpret data. Study a major in Bioinformatics and you will develop knowledge in computer science, genomics, proteomics and molecular biology, and gain a range of related skills — such as machine learning and statistics — to equip you to pursue a career in the broader areas of computational modelling and intelligent systems involving big data. Choose to follow the Computational Science or Genetics, Genomics and Systems Biology plans. These two plans focus on either the computational concepts for solving problems in the biological sciences or understanding the fundamental challenges facing biologists.

Careers
With a worldwide shortage of trained bioinformaticians and computational biologists, your strong scientific knowledge and interdisciplinary skills in computing and biology will be in demand in pharmaceutical and medical technology companies, research organisations and government agencies, in roles such as bioinformatician, clinical data manager, geneticist, research scientist and biomedical computer scientist.

SAMPLE COURSES
- Introduction to Bioinformatics
- Advanced Bioinformatics
- Introduction to Software Engineering
- Genetics
- Relational Database Systems
- Biochemistry and Molecular Biology
- High-Performance Computing
- Mathematical Biology
- Molecular Systems Biology
- Visualisation, Computer Graphics and Data Analysis

BIOMEDICAL SCIENCE

What you will study
Biomedical scientists investigate how the human body works and what goes wrong in diseases, and help develop new treatments. They provide the foundation of modern healthcare by working in partnership with other healthcare professionals to develop techniques to diagnose disease, evaluate the effectiveness of treatment, and research the causes and cures of disease. Your biomedical science studies at UQ incorporate extensive practical experience, including opportunities to work with researchers making the latest breakthroughs. Your first-year courses will provide a broad foundation in biology, chemistry and mathematics. Throughout the remainder of your degree you will expand your knowledge by choosing courses in anatomy, developmental biology, human genetics, immunology and infectious diseases, neuroscience, pharmacology and physiology.

Careers
With in-depth knowledge and skills in modern biosciences you will be at the forefront of modern medicine. A major in Biomedical Science is an established pathway for graduate entry to the Doctor of Medicine and other health programs. You may also find a career in hospital, diagnostic or research laboratories; biotechnology or pharmaceutical companies; research institutes and government departments.

SAMPLE COURSES
- Cell Structure and Function
- Development and Differentiation
- Genetics
- Human Anatomy
- Integrative Cell and Tissue Biology
- Microbiology and Immunology
- Molecular and Cellular Neuroscience
- Principles of Pharmacology
- Stem Cells and Regeneration
- Systems Physiology

CHEMISTRY

What you will study
You will learn the fundamentals of general, physical, organic and inorganic chemistry and then specialise in:
- Synthetic Chemistry – exploring the synthesis of complex molecules with uses as drugs, explosives, and in the formulation of paints and cosmetics
- Computational Chemistry – using high level theoretical calculations and powerful supercomputers to understand and predict the structures and reactivities of molecules and short-lived intermediates
- Nanoscience – exploring the processes of self-assembly for the controlled arrangement of atoms and molecules and exploring the chemistry at interfaces
- Medicinal Chemistry – exploring molecular design and the modification of compound properties to enhance pharmaceutical applications as evaluated through bioassays.

You will have access to advanced instrumental techniques to build skills that employers value.

Careers
You will be employed in diverse roles such as a chemist, materials scientist, environmental scientist, biochemist, toxicologist or a forensic scientist. Jobs outside the lab include scientific journalist, quality assurance manager, pharmaceutical sales representative, patent examiner, teacher, and roles in marketing and conservation.

This major is accredited by the Royal Australian Chemical Society.

SAMPLE COURSES
- Advanced Experimental Chemistry
- Advanced Organic Chemistry
- Advanced Inorganic Chemistry
- Advanced Physical Chemistry
- Medicinal Chemistry and Chemical Biology
- Nanomaterials and Self-Assembled Systems
- Translational Chemistry and Data Processing
- Determination of Molecular Structure
What you will study
Computer scientists advance fundamental understanding of computing, develop new and improved problem-solving techniques and design more efficient and powerful computing devices and technology. You will study a core set of computing courses and courses from other areas of science. In your first year, you will study foundational courses in programming/software engineering, information systems and discrete mathematics. The second and third years have more specialised courses in computer systems, human-computer interaction, algorithms and data structures, artificial intelligence, computer networks and information security. Take advantage of opportunities for major individual and team projects with exposure to real-world problems from industry and other areas of science.

Careers
Computer programmers are in high demand in health and scientific industries as experts in analysing and simulating massive data; as software programmers and online network specialists working in music, computer games, media and retail industries; as information security specialists in finance and commerce sectors; and as programming and computer systems experts in government sectors. Computer Science is also available as an extended major.

SAMPLE COURSES
- Algorithms and Data Structures
- Artificial Intelligence
- Computer Networks I
- Human-Computer Interaction
- Information Security
- Operating Systems Architecture
- Relational Database Systems
- Social and Mobile Computing
- Visualization, Computer Graphics and Data Analysis

What you will study
Ecologists study the interaction of organisms and their environments to find solutions for environmental problems such as climate change and using resources sustainably. You will gain first-hand practical experience in solving ecological problems in a range of rainforest, outback and marine environments including the Great Barrier Reef and island ecosystems.

Choose to specialise in:
- Terrestrial Ecology – recommended for a career in natural resource management, consultancy, conservation biology or research in terrestrial ecology
- Marine Ecology – recommended for careers in fisheries management, marine parks, environment consultancy or the Environmental Protection Agency (EPA), or fundamental research in marine ecology
- Evolutionary Ecology – recommended for employment in federal government agencies e.g. CSIRO; state agencies (Department of Agriculture, Forestry and Fisheries or the EPA); or in research at universities.

Careers
Employment demand for environmental scientists and ecologists has risen strongly in the past five years, with roles available in government, private industry, environmental impact assessment consultancies or postgraduate studies in ecology and evolution.

“I not only wanted to pursue my love of science, but I wanted to gain transferable skills. My studies helped me to develop my analytical thinking and more broadly the ability to understand a range of scientific and engineering concepts beyond the chemistry that I specialised in. We had excellent lecturers who went beyond the syllabus to give us a broad education.

I also came to realise just what a fantastic campus St Lucia is. Not just in aesthetics, but the facilities, both in the labs and for the extracurricular activities offered. Through a large number of student volunteering opportunities I also developed good public engagement and organising skills.”

Julia Stuthe
BSc Hons (Chemistry), PhD
Director Pharmaceutical and Biotech Markets, Springer Nature Publishing
FOOD SCIENCE AND NUTRITION

What you will study
The study of nutrition and food is integral to the health and longevity of society. You will study all aspects of the food system from ‘farm to fork’, including food processing principles, shelf-life studies and sensory evaluation of products with consumer panels, and the microbiological and chemical testing of products for consumer safety. You will examine the psychological, sociological and cultural factors influencing food choice and their effect on consumer health. Learn the physical and chemical composition of food to understand how food behaves under different processing and storage conditions, and how to improve the safety and quality of food and the range of products available.

Careers
As a food and nutrition scientist you will be in demand to provide safe and nutritious food to the increasing global population and work in community nutrition and education, food policy, research and development, food safety, food processing, food quality assurance, or technical sales and marketing.

To gain accreditation as a dietitian, on completion of your Bachelor of Science (Food Science and Nutrition), undertake the postgraduate Master of Dietetics.

SAMPLE COURSES
Community and Public Health Nutrition
Principles of Food Preservation
Nutrition and Exercise
Nutrition Science
Food Chemistry
Food Microbiology I
Food Product Development
Food Structure and Sensory Science
Food, Policy Safety and Quality Management

FOOD SCIENCE AND TECHNOLOGY

What you will study
Food scientists apply chemical, physical and biological sciences to ensure the quality, safety, nutritive value, processing and storage of food. Based in chemistry, biochemistry, technology/engineering, microbiology and biometry, it is the science underpinning the food industry, the largest manufacturing industry in Australia. Learn the technical aspects of foods from ‘farm to fork’, including development of new food products, the industrial processes used to manufacture food, packaging materials for optimal storage and transport, how to conduct shelf-life studies, sensory evaluation of products, and microbiological and chemical testing of products for consumer safety. Understand the processes involved in developing, producing and evaluating new foods, examine the causes and prevention of foodborne illnesses, learn the methodologies for microbiological and chemical testing of food, and discover the causes and prevention of quality degradation.

Careers
You will be in demand from Australia’s largest manufacturing industry and find employment in food technology, process and product development, food microbiology, food standards and policy, production management, quality assurance, food safety, research and development or technical sales and marketing.

Food Science and Technology is also available as an extended major.

SAMPLE COURSES
Food Chemistry
Food Microbiology I
Food Microbiology II
Food Process Engineering I and II
Food Product Development
Food Policy, Safety and Quality Management
Food Structure and Sensory Science
Functional Foods and Nutraceuticals
Principles of Food Preservation

“I am passionate about food and was curious to know about the science of it, particularly the structure of foods and the chemical reactions that take place during processing. I chose to study food technology because of the career opportunities and job prospects for graduates. The courses at UQ were intellectually stimulating and gave me the opportunity to work in teams and undertake work experience to build industry connections and put into practice what I learnt. The program really prepared me well for a career in food technology.”

Kate Brazier
Bachelor of Food Technology, Quality Assurance Administration Officer at OSI International Foods
GENETICS

What you will study
Genetics is transforming modern biology with completely sequenced genomes, computational analysis and molecular analytic tools, allowing unprecedented discoveries. You will learn to apply genetic principles to diagnose, treat, prevent and cure illnesses in animals, plants and humans; to provide security for agriculture and food production; to appreciate the diversity of life; and to develop an in-depth understanding of the structure and expression of genes, the genetic basis of traits, and the interactions between genes. A major in Genetics could see you helping the public understand the nature of genetic disease, studying the genetic diversity in endangered species populations, facilitating the development of breeding programs and conservation efforts to prevent extinction, or even using genetic engineering to generate products that make lives better. Study your Genetics major on its own or combine it with another scientific discipline.

Careers
Career choices for geneticists are some of the broadest available in the biological sciences, ranging from ecology and genome research to medicine and agriculture. You could work in roles such as a molecular geneticist, genetic counsellor in hospitals, conservation geneticist or biotechnologist. Many BSc graduates also enter into further research-based studies in honours, master’s and Doctor of Philosophy (PhD) Programs.

SAMPLE COURSES
- Biochemistry and Molecular Biology
- Genes, Cells and Evolution
- Genetics
- Genetics and Evolution of Complex Traits
- Genomics and Bioinformatics
- Human Molecular Genetics and Disease
- Laboratory Skills in Genetic Research
- Model Organism Genetics

GEOGRAPHICAL SCIENCES

What you will study
Geographical Sciences combines studies of physical geography, human geography and geographic information science (GIS). Physical geography examines the patterns and processes in the atmosphere, hydrosphere, biosphere and cryosphere and the effects of human activities on these systems. Human geography investigates human interaction with the cultural and natural environments, and how physical geography can inform the sustainable use of the Earth’s natural systems. GIS courses equip you to model, manage, analyse and apply geo-referenced information. Specialise in earth systems science, climatology, biogeography and landscape ecology, hydrology and geomorphology, marine and coastal systems, society and the environment, urban and economic geography, demography and GIS. Field studies in the Asia-Pacific region provide a comparative study of contemporary society, demography, and environmental and planning issues facing the region.

Careers
You will be in high demand for roles in natural resource management, national parks and wildlife conservation, ecotourism, planning the delivery of human services, environmental consultancy, environmental monitoring and pollution control, teaching and research, meteorology and GIS.

An additional honours year after graduation will enhance your project management, research and communication skills, and prepare you for higher level entry to your chosen career.

SAMPLE COURSES
- Catchment Processes and Management
- Climatology and Hydrology
- Geographical Information Systems
- Geography of Australia
- Geospatial Processing and Web Mapping
- Meteorology
- Physical-Biological Oceanography
- Plants, People and the Environment

GEOLOGICAL SCIENCES

What you will study
Geologists study the interacting systems of the Earth, atmosphere, hydrosphere and biosphere to discover, develop and responsibly manage minerals, energy and other resources. Geology is essential in solving environmental challenges such as managing water resources, understanding global climate change or identifying geohazards. Specialise in economic geology, mining geology, energy resources, geophysics, environmental geology, geochemistry, palaeobiology, marine geology, surficial processes and landscape evolution, tectonics, and remote sensing.

Study the Geological Sciences extended major or broaden your focus to include other science disciplines. You will have the option of completing advanced courses in field geology, culminating with a trip to the Mt Isa region. Field and laboratory based projects during an additional honours year of study will continue to solidify your skills and provide essential training for independent research and project management.

Careers
Long-term employment prospects are strong, with employment in resource and engineering companies, international contractors, government or research agencies as geoscientists, hydrologists, geophysicists, or environmental planners. Both the single and extended majors are recognised by of the Australasian Institute of Mining and Metallurgy.

SAMPLE COURSES
- Energy Resources
- Field Geology
- Geology of Coral Reefs
- Hydrogeology
- Igneous and Metamorphic Petrology
- Introduction to Geophysics
- Mineralogy
- Ore Deposits and Exploration Geology
- Sedimentology, Stratigraphy and Palaeoenvironments
**What you will study**

Marine biologists investigate the biology of marine organisms and their relationship to physical and biological aspects of their environments. Topics range from interactions among microbes to the impacts of global climate change, and from natural ecosystems to intensive aquaculture. You will develop a breadth of specialised knowledge of marine biological systems and the application of ecological and environmental strategies to conserve and manage marine organisms and ecosystems. With one of the largest marine research groups in Australia, your studies will be enriched by the input of researchers at the forefront of this dynamic discipline. Field trips to UQ’s Heron Island Research Station on the southern Great Barrier Reef and the Moreton Bay Research Station on North Stradbroke Island are offered as a part of your study. You will gain extensive practical research experience, interact with world-renowned research scientists, and visit field stations and laboratories, including UQ’s Heron Island Research Station on the southern Great Barrier Reef and the Moreton Bay Research Station on North Stradbroke Island. You can specialise in Marine Biology, Ecology and Conservation, Marine Geoscience, or Coastal Environments.

**Careers**

You can work in engineering and consulting companies, fishing and aquaculture industries, marine parks, ecotourism, marine resource development, marine science institutes, museums, oil companies, teaching, research and wildlife conservation.

Marine Biology is only available as an extended major.

**SAMPLE COURSES**

- Analysis and Communication of Biological Data
- Fish, Fisheries and Aquaculture
- General, Organic and Biological Chemistry
- Genes, Cells and Evolution
- Global Challenges in Biology
- Marine Ecology and Conservation
- Marine Invertebrates
- Marine Science
- Tropical Marine Ecosystems
- Physical-Biological Oceanography

---

**What you will study**

As a marine scientist you will study oceans and coastal ecosystems, using biological, chemical and physical sciences. You will experience how researchers investigate the marine realm, including the physical processes like waves and currents on coasts and in the oceans, and their importance to the biology and ecology of marine organisms. You will expand your knowledge of marine molecular biology, ecology, fisheries, aquaculture, marine geology and marine conservation. You will gain extensive practical research experience, interact with world-renowned research scientists, and visit field stations and laboratories, including UQ’s Heron Island Research Station on the southern Great Barrier Reef and Moreton Bay Research Station on North Stradbroke Island. You can specialise in Marine Biology, Ecology and Conservation, Marine Geoscience, or Coastal Environments.

**Careers**

In Australia, marine-based industries are worth more than $16 billion annually and offer a diverse variety of job opportunities in engineering and consulting companies, fishing and aquaculture industries, food technology, marine parks, ecotourism, marine resource development, marine science institutes, museums, oil companies, pharmacology, teaching, universities and wildlife conservation.

**SAMPLE COURSES**

- Biogeography and Geomorphology
- Biostatistics and Experimental Design
- Climatology and Hydrology
- Coastal Processes and Management
- General, Organic and Biological Chemistry
- Geology of Coral Reefs
- Marine Ecology and Conservation
- Marine Invertebrates
- Palaeobiology
- Physical-Biological Oceanography
- Tropical Marine Ecosystems

---

“*I was drawn to studying Marine Biology initially, and came to UQ as it has some of the best courses, researchers and supervisors in this area. Many classes were very inspiring with lecturers who also worked with industry or on international environmental projects with global impact. I also loved the field trips to Research Stations of Heron Island and Moreton Bay, and the Rainforest Ecology trip was equally memorable. At the Moreton Bay Research Station on Stradbroke Island I even had the opportunity to run my own marine research project in their on-site aquaria.*”

**Romain Mari**

Bachelor of Science (Marine Biology / Ecology), Master of Environmental Management, Owner – Distant Relatives Ecolodge & Backpackers
**What you will study**

Microbiologists study microscopic living organisms such as bacteria, viruses, fungi, algae and protozoa to investigate their impact on all aspects of life. You will discover how well-known diseases caused by microbes involve viruses such as influenza and HIV, bacteria such as meningococcus, Staphylococcus, *E. coli*, and protozoa such as malaria. You will learn how to apply this knowledge across diverse fields such as medicine, food technology, agriculture and environmental management. During your studies, you will learn from some of the leading microbiologists in education and research in Australia. Your studies will encompass knowledge from the key areas of immunology, virology, parasitology, environmental microbiology, microbial biotechnology and microbial genomics.

**Careers**

You will find employment in areas such as universities, biotechnology companies, and agricultural, medical and veterinary institutes, the food and beverage industry, hospitals or government agencies in specialist areas such as forensics, biosecurity and quarantine. After graduation, you may choose to enter into additional research-based studies in honours, master’s and Doctor of Philosophy (PhD) programs.

**SAMPLE COURSES**

- Advanced Immunology
- Biochemistry and Molecular Biology
- Biomedical Parasitology
- Chemical Biology
- CSI UQ: Introduction to Forensic Science
- Fungi and Plant Diseases
- Genes, Cells and Evolution
- Microbes and Human Health
- Microbial Genomics
- Microbiology and Immunology
- Molecular Microbiology
- Virology

---

**What you will study**

Mathematics is one of the most enduring fields of study. As a mathematician, you will develop new ideas and proofs and apply your modelling skills with the latest computer technology to solve problems in the physical and biological sciences, engineering, information technology, economics and business. You can study mathematics as part of a dual degree or in combination with another major to excel in the mathematical aspects of your chosen discipline. You will study essential topics in calculus, linear algebra, discrete mathematics and differential equations, and then select more specialised courses that emphasise new ideas in mathematics such as coding and cryptology, mathematical physics, mathematical biology, bioinformatics and finance. You can choose to specialise in one or more of Pure Mathematics, Applied Mathematics, Financial Mathematics and Mathematical Physics.

**Careers**

You will be sought by employers for your excellent quantitative skills and problem solving abilities. You can work in operational research or financial mathematics in banking, finance, insurance and risk management, and in areas such as environmental, physical and biomedical sciences, engineering, defence, teaching, research, animation, or transport and logistics. Mathematics is also available as an extended major.

**SAMPLE COURSES**

- Abstract Algebra and Number Theory
- Algebraic Methods of Mathematical Physics
- Coding and Cryptography
- Differential Geometry
- Financial Mathematics
- Functional Analysis
- Graph Theory and Design Theory
- Mathematical Biology
- Numerical Methods in Computational Science
- Operations Research and Mathematical Planning
- Partial Differential Equations

---

“**My UQ degree gave me a mathematical foundation for meteorology, which has been really invaluable in my role as a weather forecaster for the Bureau of Meteorology. There are some seriously big partial differential equations in atmospheric dynamics and my main responsibilities are issuing seven-day forecasts for the public and routine short-term and specialised forecasts for the aviation industry. What I found most beneficial about my program was the staff and student interactions. It was really easy to make friends with older students and lecturers so it was always easy to get help and advice for those willing to learn.”**

Matthew Marshall
Bachelor of Science (Honours)
Meteorologist, Bureau of Meteorology,
What you will study

As a plant scientist you will be tackling important global problems including food security, global warming, preserving biodiversity, and dependency on fossil fuels. Your challenge will be to increase global food production to match population growth using sustainable solutions while maintaining biodiversity. During your studies, you will be exposed to initiatives including breeding high-yielding, pest-resistant crops, and producing biofuels and biomaterials from plants with the potential to limit carbon emissions. You will explore concepts such as using plants to produce industrial products, biopharmaceuticals and energy (biofuels), new healthier sugars, and anticancer drugs.

Supported by cutting-edge UQ research, three research centres and excellent links to industry, you can focus on study streams covering Plant Ecology and Sustainability, Plant Biotechnology and Molecular Plant Science, and Plant Pathology.

Careers

You will be in demand by employers such as universities, government departments, research institutes, laboratories, seed companies, mining companies, nurseries, landscape designers and environmental consultants.

After graduation, you may choose to continue into further research-based studies in honours, master’s and Doctor of Philosophy (PhD) programs.

SAMPLE COURSES

- Biodiscovery from Plants and Commercialisation
- Cells to Organisms
- Ecology Field Studies
- Genetics
- Global Challenges in Biology
- Plant Biology
- Plant Disease
- Plant Microbe and Insect Interactions
- Plant Molecular Biology and Biotechnology

Sarah Sweet

Bachelor of Science (Mathematics)/Bachelor of Business (Management), Bachelor of Science (Honours) Astrophysics, PhD (Astrophysics), Postdoctoral Research Fellow Australian National University
PSYCHOLOGY

What you will study
Psychology is the scientific study of how people behave, think and feel, and examines brain function, memory, conscious experience, lifespan development, social behaviour and functional and dysfunctional behaviour. You will develop analytical skills and understand how to apply the scientific perspective to psychological phenomena. Your courses provide a foundation in all sub-disciplines of psychology, including neuroscience, learning and cognition, developmental psychology, social psychology, and the scientific methods and statistical techniques used in psychological research. You will develop an in-depth understanding of the issues and learn to conduct psychological research and interpret findings.

Careers
Your combination of science and psychology studies provides a competitive edge in professions such as human resources, mental health, counselling and corrective services. With further training, you may become a registered psychologist specialising in clinical psychology, health psychology, organisational psychology, or sport and exercise psychology. To gain full registration as a psychologist with the Psychology Board of Australia you should complete a Psychology extended major. After graduation, you may also choose to enter into further research-based studies in honours, master’s and Doctor of Philosophy (PhD) programs.

SAMPLE COURSES
- Developmental Psychology
- Learning and Cognition
- Neuroscience for Psychologists
- Parenting and Family Psychology
- Psychopathology
- Psychotherapies and Counselling
- Sensory Neuroscience
- Social and Organisational Psychology
- The Neuroscience of Social Behaviour

PUBLIC HEALTH

What you will study
Public health professionals focus on preventing disease, prolonging life and promoting health. Your multidisciplinary studies will provide a broad overview of public health to prepare you to explore and examine the basis of disease and wellbeing by considering human behaviour, the physical environment, the socio-economic and cultural determinants of health, and healthcare management systems. You will study epidemiology, biostatistics, health systems, environmental health and social sciences and develop skills in how to measure, plan, manage and evaluate health programs and services to prevent illness and promote health.

Careers
You will find employment in the public health sector, working with government, non-profit or private health-based organisations in either a non-clinical role, clinical role, research role, or working behind the scenes in the business of health. Non-clinical careers include roles in health promotion, community health, health service management or health information in hospitals and other healthcare facilities, community health clinic management, community nutrition, or public health management. This major provides a strong foundation for entry into clinical careers in Medicine or Allied Health or to progress into the Master of Public Health or research via an additional honours year.

SAMPLE COURSES
- Introduction to Public Health
- Health Systems and Policy
- Aboriginal and Torres Strait Islander Health
- Major Diseases and their Control
- Environmental Health
- Global Health and Infectious Disease
- Understanding Health Behaviours
- Nutrition in the Lifespan

“I love working with people, talking to farmers about the challenges they face and discovering how we might be able to help them. It’s very rewarding and I genuinely feel like we are improving lives and supporting ten local economies within Africa. When I’m not in the field talking to farmers, I’m often building Excel models to show potential investors how many people their money could help. UQ’s practical approach to mathematics definitely helped me not just understand numbers, but use them in a business context. I also think that physics was excellent training in how to solve problems. At UQ I learned how to structure complex problems, disaggregate issues and approach ambiguous challenges with confidence.”

Kathryn Zealand
Bachelor of Science (Honours) (Physics)
Currently studying: MBA (Stanford), MPA (Harvard), Former Enterprise Developer Clinton Foundation, Nairobi
**STATISTICS**

**What you will study**
Statistics is essential to science, engineering, health sciences, social sciences, economics and marketing. Statisticians design, collect, analyse and interpret data to extract patterns and other useful information. As a statistician in industry, you may predict stock market fluctuations and insurance claims, model the flow of internet traffic and mobile phone calls, assess drought conditions, analyse population models for endangered species, and model the spread of diseases. You will develop a wide range of skills, including probabilistic reasoning and problem solving, statistical modelling and analysis, optimal design of statistical experiments, advanced data exploration and visualisation, application of statistical software, development of statistical algorithms, and report writing and presentation. Summer vacation research projects will give you invaluable practical experience and develop your industry connections.

**Careers**
You will be in high demand in business, industry and government, working in quality control, and product development and improvement. There are also excellent employment opportunities in many scientific, medical, environmental, defence and agricultural agencies.

You will be eligible for accreditation as a graduate statistician from the Statistical Society of Australia and, with experience, eligible to apply to become an accredited statistician.

**SAMPLE COURSES**
- Advanced Multivariate Calculus and Ordinary Differential Equations
- Experimental Design
- Probability and Statistics
- Probability Models and Stochastic Processes
- Problems and Applications in Modern Statistics
- Statistical Learning
- Statistical Modelling and Analysis

---

**ZOOLOGY**

**What you will study**
Zoologists study animals to understand how they relate and interact with their physical and biological environments. They also investigate the evolution and diversity of animals using modern approaches to compare and experiment. These approaches include animal morphology, development and genetics, behaviour, ecology, physiology, biochemistry and molecular biology. You can take courses in climate change biology, wildlife and conservation biology, entomology, environmental physiology, marine biology, fisheries biology and aquaculture, terrestrial ecology, molecular ecology and mathematical applications in biology. You can also choose to combine the study of animals with biostatistics, ecology, evolution, genetics and insect science. You will gain practical experience to prepare you to work with animals, including field courses offered in the Australian outback, rainforests, Stradbroke Island and the Great Barrier Reef.

**Careers**
A large variety of careers rely on the knowledge and skills of zoology, although it is unusual to find a job titled ‘zoologist’. Such careers include conservation work, biosecurity, forensics, biomedical research and more. You can find employment in commercial laboratories, government, national parks, museums, zoos and conservation authorities, medical laboratories and education institutions.

**SAMPLE COURSES**
- Animal Behaviour
- Arthropods and Human Health
- Biostatistics and Experimental Design
- Insect Identification and Taxonomy
- Macroeology and Biogeography
- Marine Invertebrates
- Physiological and Integrative Zoology
- Vertebrate Diversity and Evolution Zoology

---

“I love animals, and I had heard about UQ’s reputation for excellent courses related to animal studies. I enjoyed having the opportunity to do field work during my degree. Some of the highlights of my time at UQ included going to Heron Island for a marine science subject and participating in all of the practical components of my studies. This set me up with practical experience as well as the knowledge to gain a job in my chosen profession. I started as a volunteer at SeaWorld while I was completing my studies and secured a casual position there just a few months after graduating.”

Emma Pearce
Bachelor of Science (Zoology)/Bachelor of Arts (Japanese and Geography)
Senior Carnivore Keeper, Auckland Zoo
Veterinary Science (Honours)

Taught at UQ’s Gatton campus you will access world-class facilities, teachers, research and knowledge during your program and become a fully qualified and internationally recognised veterinarian.

Why Veterinary Science (Honours) at UQ?
Gain the foundational knowledge and practical skills to apply medical, diagnostic and therapeutic principles to companion, domestic, exotic, wildlife and production animals. Developed in consultation with the profession, this program incorporates the latest research developments, coursework and placements to ensure you receive the most relevant, up-to-date knowledge and expertise to prepare you as a veterinary professional.

Become a veterinarian with a globally accredited qualification
On graduation, you’ll be eligible to register as a veterinary science practitioner in Australia, New Zealand, the United Kingdom, South Africa, Singapore, Hong Kong or Malaysia and be eligible to sit the North American Veterinary Licensing Examination.

What you will study
Your studies commence with foundational training in the anatomy, physiology, biochemistry, nutrition and behaviour of healthy domestic and wild animals. Your first three years will include over 600 hours of clinical and laboratory practical training and you will gain animal handling and husbandry skills. You will acquire a detailed knowledge of animal pathology and diagnostic skills and learn to link these to the manifestation and recognition of various disease processes. In your fourth year, you will undertake dedicated medicine and surgery courses for each of the major animal species, population and public health training, and complete 130 hours of clinical practical work. The final fifth year is clinically oriented with over 1400 hours of lecture-free training within university and privately owned practices. Throughout the program you will develop your skills in essential clinical and professional competencies such as communication, business skills and self-development.

Placements and practical experience
You will undertake over 400 hours of extramural studies** involving placements on farms and other animal management enterprises and within clinics, government offices and laboratories to provide authentic clinical and professional competencies and improve your work readiness. You will receive essential hands on experience at UQ Gatton’s Small Animal Hospital and Equine Specialist Hospital. Additionally, you may participate in summer or winter research scholarship programs or develop your skills through volunteering in the on-campus animal and clinical facilities.

Careers
As a fully qualified veterinarian you will work as a general practitioner in veterinary clinical practice and seek employment in sectors including biosecurity, animal production and disease control, pharmaceutical livestock and biotechnology industries, or undertake research roles within universities and governments.

SAMPLE COURSES
Animal and Veterinary Biology
Animal Breeding and Molecular Genetics
Animal Management for Veterinarians
Comparative Animal Clinical Studies
Equine Clinical Studies
Infectious Diseases
Ruminant Medicine and Surgery
Rural Veterinary Practice – Livestock Medicine
Small Animals Clinic
Veterinary Anaesthesia, Diagnostic Imaging and Emergency and Critical Care
Veterinary and Animal Enterprise Business Fundamentals
Veterinary Professional Practice
Veterinary Public Health and Pathology
Veterinary Reproduction

For more information
future-students.uq.edu.au

Bachelor of Veterinary Technology

Equip yourself with the theoretical and practical skills to become a para-veterinary healthcare specialist, working in animal health and welfare.

Why Veterinary Technology at UQ?

Learn from internationally regarded academics while accessing the world-class animal health facilities at UQ’s Gatton campus. As a para-veterinary healthcare specialist, you will be equipped with critical thinking, problem solving and self-directed learning skills, and be well prepared for supervisory and management roles in a range of animal-related fields.

What you will study

Study animal handling and care, welfare and behaviour, applied and clinical nutrition, mechanisms of animal disease and diagnostic techniques, clinical aspects of small and large animal health, veterinary pharmacology and therapeutics, veterinary surgical and medical nursing principles, and veterinary practice management.

As you progress through the program, you can choose from a wide range of elective courses to broaden or focus your skills or to pursue an area of interest.

Dual program

Study the Bachelor of Veterinary Technology as a dual degree with the Bachelor of Agribusiness and combine practical business skills with your interests in veterinary technology.

Placements and practical experience

In your first and second years, you will gain at least 80 hours of practical sessions and extramural studies* of 30 days. In your third year, you will complete a total of 19 weeks of clinical rotation and placement. These placements are great opportunities to establish industry contacts and gain current, industry-relevant experience.

Beyond the formal curriculum, you can participate in summer or winter research scholarship programs in UQ’s School of Veterinary Science or choose to develop your skills through volunteering in one of the many animal and clinical facilities within the School and on campus.

Get additional skills

Broaden your skills by concurrently enrolling in the Certificate IV in Veterinary Nursing, the UQ Skills Certificate III in Rural Operations or the Farm Ready program through UQ Skills (details available at bit.ly/uq-skills-courses).

Careers

You will find employment within the veterinary industry in areas such as veterinary practice, animal health, biosecurity, veterinary pharmaceutical companies, animal nutrition companies, government agencies, research institutions and the livestock sector.

Undertaking an honours year in either a research or clinical stream could lead you to postgraduate studies.

Bachelor of Wildlife Science

Build expertise in animal biology and the conservation and management of wild animals. Study native and exotic amphibians, reptiles, birds and mammals, biodiversity and human-wildlife interactions.

Why Wildlife Science at UQ?

This hands-on degree focuses on animal biology and the management of wild animals. As one of the world’s top universities, UQ is a leader in this field with the best specialist animal research and veterinary facilities in the southern hemisphere. You will study with UQ Gatton's wildlife scientists, who are involved in the conservation and management of free-ranging and captive wildlife as well as rare or exotic animals in Australia and overseas. You will learn from biologists as they focus on wildlife anatomy and physiology, captive breeding, reproduction, nutrition, health, husbandry, ecology, welfare and behaviour. As part of your degree, you will also gain hands-on wildlife experience in UQ’s wildlife research facilities.

What will you study

You will gain the expertise to implement and evaluate wildlife management programs for captive and free-ranging wildlife. Develop a deep scientific knowledge of wildlife anatomy and physiology, captive breeding, reproduction, nutrition, health, husbandry, ecology, welfare and behaviour. With excellent wildlife trapping, identification and animal handling skills, you will be able to make a major contribution to the wildlife, game and vertebrate pest management industries in Australia. As you progress through the program, you can choose from a range of electives to broaden or focus your knowledge or pursue an area of interest. You will study ‘Game Management - the Science of Sustainable Use’, not taught in any other Australian university.

Study this program either internally on campus, or off campus in external mode. Where necessary, the practical components for external students may be completed during intensive on-campus residential schools. Note that the external mode is not available to international students studying in Australia on a student visa.

Dual program

You can study the Bachelor of Wildlife Science as a dual degree with the Bachelor of Agribusiness. The dual four-year program allows you to combine practical business skills with your interests in wildlife science.

Placements and practical experience

You will have the opportunity to spend nearly a month overseas, typically in South Africa, in one of your elective courses ‘Short International Experience’, studying natural resource management. You will also have the opportunity to participate in a minimum of 120 hours of industry programs in locations such as zoos, sanctuaries, wildlife parks, government agencies, welfare organisations and animal breeding enterprises. Industry placements will add to your practical, hands-on work experience. They are also great opportunities to establish industry contacts and gain current, industry-relevant experience.

Get additional skills

You can also broaden your skill set by concurrently enrolling in the Certificate IV in Captive Animals, the UQ Skills Certificate III in Rural Operations or the Farm Ready program through UQ Skills (details available at bit.ly/uq-skills-courses).

Careers

You will find employment in research, managerial and educator roles, including as a biologist or wildlife scientist, wildlife technician, conservation officer in ecotourism, land or marine resource manager, vertebrate pest and game manager in government agencies or wildlife sanctuaries and zoos. You can also choose to pursue a research career by undertaking a research honours year which could lead to postgraduate studies.

Sample courses

- Animal Health and Epidemiology
- Animal Behaviour, Handling and Wellbeing
- Australian Terrestrial Vertebrates
- Biology of Australian Marsupials and Monotremes
- Elements of Ecology
- Game Management – The Science of Sustainable Use
- Principles of Wildlife Management
- Wildlife Technologies
- The Management and Husbandry of Zoo Animals

For more information

future-students.uq.edu.au/science.uq.edu.au/planner
Food and retail
You can buy food and drinks from the Coffee Pod, Dining Hall and Walkway Café, and you can purchase and sell books at our retail bookshop. There’s an on-campus ATM and a post office, and keep an eye out for the regular events for students in the Central Walkway.

Teaching and research facilities
The campus houses production animals, horticultural fields, a plant nursery, post-harvest facilities, research laboratories and greenhouses, a wildlife facility, specialist veterinary and equine hospitals, and some of the best animal teaching facilities in the southern hemisphere.

Fitness
UQ Gatton’s gym has a weights room and cardio equipment, and offers group fitness classes every week. Swim in the 25-metre pool or grab a friend and head to the squash, tennis and basketball courts, cricket nets, indoor sports hall or one of three playing fields.

Student Societies
Join a student society and make new friends at the international food fair, or join a tour to one of the local landmarks.

Library
UQ Gatton’s recently refurbished library provides computers, break-out spaces, quiet individual study spaces, height-adjustable desks, meeting rooms, a postgraduate study area, and a 24-hour study space.

Free inter-campus bus service
UQ provides a free inter-campus bus service between UQ Gatton and UQ St Lucia for students and staff.

For accommodation information, see page 40.

future-students.uq.edu.au/campuses
UQ St Lucia

UQ’s St Lucia campus is renowned as one of Australia’s most attractive campuses, just seven kilometres from Brisbane’s CBD.

Bounded by the Brisbane River on three sides, UQ St Lucia offers a perfect study, research and living environment, combining the vitality of a modern campus with the tradition of an established university.

The campus has expansive landscaped grounds, fanning out from a heritage-listed sandstone cloister that encloses the iconic centre-piece of the campus, the Great Court.

You will find world-class teaching and research facilities at UQ St Lucia, including Queensland’s largest research library plus fully equipped laboratories and lecture theatres. UQ St Lucia is also a great place to relax and enjoy university life with market days, bands and sporting events, or you can join one of the 140 clubs and societies.

Research institutes on campus, many with a multidisciplinary focus, include:
• Australian Institute for Bioengineering and Nanotechnology
• Global Change Institute
• Institute for Molecular Bioscience
• Institute for Social Science Research
• Mater Research Institute–UQ
• Queensland Alliance for Agriculture and Food Innovation
• Queensland Brain Institute
• Sustainable Minerals Institute.

UQ Herston

Just three kilometres from the Brisbane CBD, UQ Herston is the specialist campus for health and medical teaching and research.

Sharing premises with the Royal Brisbane Hospital, Women’s Hospital and the QIMR Berghofer Medical Research Institute, UQ Herston houses a vibrant clinical and research community who deliver innovative and contemporary research and education programs in a clinical academic environment.

Its proximity to a major hospital benefits students and staff and demonstrates UQ’s commitment to working within a clinical academic environment.

Major research institutes on campus include the UQ Centre for Clinical Research, along with other key facilities such as the Oral Health Centre, Australia’s largest and most advanced specialist oral health service, and the purpose-built Herston Imaging Research Facility.

Surgical, Treatment and Rehabilitation Service (STARS)

Currently under construction, STARS will be one of the largest tertiary specialist rehabilitation centres in the southern hemisphere, accommodating about 100 nursing and allied health students from 2020.
Fees and costs
Course fees and student contributions
Most undergraduate places for domestic students at UQ are funded partly by the Australian Government (Commonwealth support) and partly by you (student contribution).

If you’re an Australian or New Zealand citizen, or an Australian permanent humanitarian visa holder and have a Commonwealth-supported place, you may also qualify for the Higher Education Loan Program (HELP) to defer payment of your student contribution and Student Services and Amenities Fee (SSAF). You will need to apply for a tax file number at ato.gov.au, if you don’t already have one, in order to obtain a HELP loan.

International students pay full tuition fees. If you have a Commonwealth-supported place, your student contribution amount depends on the fee band level of the courses you choose (see table at above right).

Fees are charged according to the courses you choose, not the program you’re enrolled in, so it’s not possible to publish a fixed fee for a program. Because most students can choose different electives during their program, costs will vary.

However, indicative annual fees are listed with each program on our Future Students website to help you plan your budget. future-students.uq.edu.au/study/find-a-program

Student Services and Amenities Fee
The Student Services and Amenities Fee (SSAF) is a compulsory fee that is used to subsidise, support or fund non-academic services for students, such as support services, advocacy, study skills, career development and employability.
UQ levies the SSAF – which is capped at a maximum of $308 for 2020 – according to whether you’re an internal or external student, and full-time or part-time. The fee is indexed annually.
bit.ly/uq_ssaf

Keeping your costs down
• Investigate the financial support and fee payment options offered by Centrelink. humanservices.gov.au

Plan your finances
University is a valuable investment in your future. Knowing what it costs will help you manage your money.
Accommodation

We have accommodation options to suit your lifestyle and make you feel at home. Live in a college on one of the best campuses in the world, go to the inner city for off-campus student accommodation, or find your own home in the private housing market.

On campus colleges
Do you want a traditional, immersive university experience? If you are studying at one of UQ’s Brisbane campuses you can live in one of our ten colleges at UQ St Lucia, or if you are studying at UQ Gatton, live at the Gatton Halls of Residence. You can walk to class, enjoy services like academic support and social and sporting activities, and your meals are provided. Plus, you will make friendships for a lifetime. Apply before you arrive to secure a room.

liveuq.edu.au

Off-campus student accommodation
Do you want to cook your own meals but still live in a student community in the inner city? Choose from one of our recommended student accommodation providers. A variety of studio, single bedroom apartments and twin share options are available. You can pre-book a room before you arrive.

my.uq.edu.au/student-support/accommodation/approved-providers

Private housing
Are you the more independent type? You might like to share a house or apartment with other people. Brisbane’s rental market features everything from low-cost share houses to high-rise apartments, while Gatton’s rental market features a range of affordable share houses. To find a room, apartment or house, first check our UQ Rentals database. There are also private rental accommodation websites and you can rent directly from real estate agents. At the start of a lease you typically pay two weeks rent in advance and a bond (four weeks rent). You should get the bond back at the end of your lease if you maintain the property well. Make sure you inspect a property in person before paying money or signing anything. Allow at least one month before classes start to get organised, arrange inspections and lodge your rental application. Make sure you arrange temporary accommodation for when you land, if needed.

rental.uq.edu.au

UQ Accommodation team
Our UQ Accommodation team can help you find your new home. If you are new to the housing market, attend our free information sessions before classes start. The team can also give you advice, check documentation for you, and direct you to useful material online.

my.uq.edu.au/student-support/accommodation

Associate members program
Does college life appeal to you but you are not going to live in a college? As a first-year student, you can access a college’s resources and participate in their activities through our college associate members program. Membership benefits vary between colleges.

liveuq.edu.au/the-colleges

Guaranteed accommodation
When you apply through UQ Guaranteed Accommodation, you are able to secure your accommodation prior to arriving in Brisbane and commencing studies at UQ. The UQ Residential Colleges (on campus) and UQ Approved Providers (off campus) set aside a guaranteed number of rooms so you are able to compare, choose and secure the most appropriate accommodation easily. Find out more at:

Are you an international student?

While a lot of information in this guide is relevant to you, certain key information may be different for international students.

You are an international student if you are:

• not a citizen of Australia or New Zealand, or
• not an Australian permanent resident, or
• a temporary resident (visa status) of Australia.

Eligibility for UQ study

For admission into undergraduate programs at UQ, you must have:

• completed secondary studies equivalent to Queensland Year 12 with a score comparable to the Queensland rank specified for your program
• satisfied individual program requirements (e.g. specific subject prerequisites, auditions or interviews)
• satisfied UQ’s English language proficiency requirements.

If you do not meet these criteria, you might consider taking the Foundation Year bridging course offered by International Education Services (IES) or English language training offered by the Institute of Continuing and TESOL Education (ICTE).

Applying to UQ

A UQ degree is a qualification the world will recognise. If you’ve got the ability, commitment and ambition to make the most of UQ, then we want to hear from you.

future-students.uq.edu.au/apply

Study options at UQ

If you would like to know more about your study options at UQ, enquire through our online form and one of our UQ advisers will respond.

Register for an advisory session.

If you are in Brisbane, sign up for a campus tour.

We also have a range of publications, including the international undergraduate and postgraduate student guides to help you.

“Studying at an international university can be challenging and you may be worried, like I was, about handling the transition but please be assured your lecturers, tutors and peers are always there to help.”

Grace Loo
Bachelor of Veterinary Science

Tuition fees

As an international student, you will pay tuition fees, a Student Services and Amenities Fee, and potentially other administrative fees. UQ has program-based tuition fees for coursework award programs, meaning that all courses within a program are charged at the same tuition fee rate per unit for a given academic year. Some programs also have additional costs, such as field trips.

future-students.uq.edu.au/apply/international/tuition-fees

Other expenses

International students applying to study in Australia must have a student visa or an alternative visa that enables them to study full-time on campus. Please consider expenses such as visa and medical (pre-departure) fees, general living expenses, return airfares, and Overseas Student Health Cover (OSHC) when you plan your budget.

future-students.uq.edu.au/international/cost-living

UQ has more than 20,000 international students from 143 countries

Applying to UQ

Follow the steps to apply to UQ and start on the path to your future.

STEP 1
Choose

Choose your program
- Read your options on pages 10–36.
- Visit future-students.uq.edu.au.

TIP: Check that you meet all academic and other entry requirements and meet any specific program deadlines.

A range of study area guides and other UQ publications can help you choose the right program.
future-students.uq.edu.au/publications-and-forms

STEP 2
Apply

Apply to study

Future students
Apply by visiting qtac.edu.au.

Current students at other universities
Apply by visiting uq.edu.au/apply.

TIP: Before applying, check that your current institution will give you transferable credit.

How to apply via QTAC
Apply for admission to UQ undergraduate programs through the Queensland Tertiary Admissions Centre (QTAC). The QTAC website explains how to apply, the entry requirements, and the application deadlines.

List up to six program preferences, but you will receive only one offer – for your highest preference that you are eligible for. Place programs in order of preference, placing your dream program first and your back-up options next.
qtac.edu.au

STEP 3
Accept

Accept your offer
1. Log in by clicking ‘Applications’ and then ‘Application Log In’ at qtac.edu.au.
2. Select ‘Log In’ and enter your details.
3. Select the ‘Accept’ offer option.
4. Accept your offer.
5. Activate your student account.
6. Go to my.uq.edu.au/starting-at-uq and follow the instructions.
7. Get excited about starting at UQ.
Enrol in courses
1. Access your program rules, course list and other helpful information by logging in to my.uq.edu.au/starting-at-uq.
2. Choose your courses at my.uq.edu.au/programs-courses.
3. Enrol online at sinet.uq.edu.au.
4. Select preferred class times via My Timetable (in my.UQ portal).
5. Pay fees (see page 39).

Prepare for Week 1
• Complete the steps on the Starting at UQ website.
  my.uq.edu.au/starting-at-uq.
• Attend a Getting Started session.
• Check if you need to attend any program sessions before Orientation Week.
• Pick up your student ID card after you have enrolled.
• Get answers to any remaining questions before classes start by emailing starting@uq.edu.au.

Get ready for the ultimate university experience
• Prep Week – jump-start your university journey.
• Experience a taste of #uqlife during Orientation Week.
• Connect Week – join the social scene, make new friends and link in with your academic circle.
• Culture Week – experience UQ’s diverse cultural and global networks.
• Success Week – learn about the resources available to help you succeed at UQ.
• Instagram (@uniofqld) or Snapchat (uniofqld) your UQ experience to your friends.

Are you an Aboriginal or Torres Strait Islander student?
Our Aboriginal and Torres Strait Islander Studies Unit can help you with:
• understanding your options
• choosing what to study
• applying for scholarships and entry.

Want to find out what life as a UQ student is like?
The best way to get a taste of life as a UQ student is to visit us. UQ’s St Lucia Shuttle Cart Tours are a fun and interactive way to immerse yourself in our welcoming student community. For more details on UQ’s tour offerings, visit:
future-students.uq.edu.au/campus-tours
You can also keep up to date with the latest news and upcoming events by subscribing to our mailing list. We’ll keep you up to date with all you need to know to make your journey to university easier.
engage.uq.edu.au/Register-for-updates-FSCC

Want to meet our staff at events?
TSXPO
Attend the free Tertiary Studies Expo (TSXPO) to speak with UQ staff and students about programs and courses available at UQ. Saturday 18 July and Sunday 19 July 2020
future-students.uq.edu.au/events

Want to experience UQ at school?
Enhanced Studies Program
Want to try out uni before committing? UQ’s Enhanced Studies Program lets you complete a university course during Semester 1 of Year 12. The program is free, boosts your entry rank by one point, and you may receive credit if you go on to study at UQ. Some courses are available externally or via flexible delivery.
esp.uq.edu.au

InspireU
InspireU is an aspiration-building program for Aboriginal and Torres Strait Islander high school students. Students experience life at university, attend a residential camp themed around a professional discipline and participate in interactive faculty based workshops.
atsis.uq.edu.au/future-students/inspireu-programs

Be sure to share your UQ campus tour experience
@uniofqld

uniofqld

Young Scholars Program
Are you a high-achieving Year 11 student? Apply for our Young Scholars Program to meet UQ’s academic community and mix with high achievers from across Australia. The program includes a residential camp at the end of Year 11.
young-scholars.uq.edu.au

Workshops for schools
Visiting school groups can practise archaeological field methods, build a robot, work in a lab, get a fitness test, or learn how to develop apps in our on-campus workshops.
uq.edu.au/high-schools/activities-and-workshops-students

Improve your languages while still at school
Practise your language skills with native speakers at our summer or winter intensive sessions at UQ’s Institute of Modern Languages. Designed for Year 11 or Year 12 students, get a jump on the year ahead.
iml.uq.edu.au/iml-uq-high-school-program

FEAST
Future Experiences in Agriculture, Science and Technology (FEAST) is a four-day residential program to inspire high school students about rewarding science careers in the agriculture, animal, plant and food industries. It’s open to students in Years 11 and 12 and is held each July at UQ Gatton.
science.uq.edu.au/event/feast

Want more info?
With the world at your feet and so many options to explore, starting university can feel overwhelming. Take advantage of all the resources available to help you make the right decision for you.

Answer your questions
The Future Students Contact Centre (FSCC) can advise on programs, entry requirements and application procedures. Consider the FSCC your first point of contact.
future-students.uq.edu.au/ask

Online resources
Visit UQ’s Future Students website to view programs and courses; find out how to apply and what entry requirements you need; check tuition fees, program outlines, how long programs will take and career outcomes. You can also discover a range of information about life as a UQ student.
future-students.uq.edu.au

Visit our campus
Visit UQ to see what our campuses have to offer. Prospective students can book a shuttle cart tour of UQ St Lucia or a guided tour of UQ Gatton. You can even take in the sights at your own pace with UQ’s St Lucia Campus Self-Guided Tour. Details on where to collect your free map can be found at:
future-students.uq.edu.au/st-lucia-walking-tour

Didn’t get the OP you were expecting?
Every OP is an opportunity, and at UQ we are here to help support you in your journey to university. In the following pages, you will discover all the different ways you can connect with UQ staff to discuss your options. For an overview of the admission process at UQ, please refer to the helpful admission information on page 26.
future-students.uq.edu.au
UQ offers more than 80 exciting undergraduate programs and 60 dual programs to help build your dream career. For more details, check out our range of publications, or go to future-students.uq.edu.au.
